CQUINs (Commissioning for Quality and Innovation (CQUINs) 2017-18

The following CQUIN (commissioning for quality innovation) targets are agreed with our NHS commissioners. We assign CQUIN leads on clinical and operational levels to appropriately support each CQUIN. We publish monthly data on how we are doing against milestones and this is published in the Trust's Integrated Quality & Performance Report, which is discussed in our public board meetings. The NHS Commissioners are informed of progress on a quarterly basis.

Achieving an improvement in two of the three NHS annual staff survey questions on health and wellbeing, MSA and stress	Strategic Objective	Goal Name	Description of Goal
Improving services for people with Mental Health needs Offering advice and Guidance (A&G) Set up and operate A&G services for non-urgent GP referrals NHS e-Referrals CQUIN Offering advice and Safe Discharge Proactive and Safe Discharge Preventing ill Health Preventing ill Health Preventing ill Health Preventing ill Health by risky behaviours (alcohol and tobacco) Improving the assessment of wounds Personalised Care / support planning Specialised Services Inpatient Paediatric Services Inpatient Paediatric Services Activation System for Patients with Long Term Conditions — HIV Improving Haemoglobinopathy Pathways through ODN Networks Offering advice and Guidance (A&G) Set up and operate A&G services for non-urgent GP referrals to consultant-led 1st outpatient services only and the availability of services and appointments on the NHS e-Referral Service Improvements to the experience and puppointments on the NHS e-Referral Service Improvements to the experience and puppointments on the NHS e-Referral Service and popointments on the NHS e-Referral Service and papointments on the NHS e-Referral Services and papoi	Goal Number	NHS Staff Health & Well Being	NHS annual staff survey questions on health and
Health needs Offering advice and Guidance (A&G) Set up and operate A&G services for non-urgent GP referrals NHS e-Referrals CQUIN GP referrals to consultant-led 1st outpatient services only and the availability of services and appointments on the NHS e-Referral Service Proactive and Safe Discharge Improvements to the experience and outcomes for young people as they transition out of Children and Young People's Mental Health Services (CYPMHS) Preventing ill Health Preventing ill Health by risky behaviours (alcohol and tobacco) Improving the assessment of wounds Increase the number of wounds which have failed to heal after 4 weeks that receive a full wound assessment Personalised Care / support planning Embedding personalised care and support planning for people with long-term conditions Improving Inpatient Paediatric Services Improve Paediatric Intensive Care (PIC) capacity utilisation. In some cases children could be better managed by providing high dependency care closer to home but more needs to be done to understand demand particularly in relation to care delivered in acute hospitals. Activation System for Patients with Long Term Conditions – HIV Activate patients (the knowledge, skills and capacity to manage their own condition) to enable better outcomes including reduced frequency of exacerbations and associated high cost interventions. Improving Haemoglobinopathy Pathways through ODN Networks Though ODN Networks Though ODN Networks The proving Haemoglobinopathy Pathways on a clearly defined network basis. This is set out in published standards produced by specialist soci-		Reducing the Impact of Serious Infections	Antimicrobial Resistance and Sepsis
NHS e-Referrals CQUIN OF referrals OF referrals to consultant-led 1st outpatient services only and the availability of services and appointments on the NHS e-Referral Service Proactive and Safe Discharge Improvements to the experience and outcomes for young people as they transition out of Children and Young People's Mental Health Services (CYPMHS) Preventing ill Health Preventing ill Health by risky behaviours (alcohol and tobacco) Improving the assessment of wounds Increase the number of wounds which have failed to heal after 4 weeks that receive a full wound assessment Personalised Care / support planning Embedding personalised care and support planning for people with long-term conditions Improve Paediatric Intensive Care (PIC) capacity utilisation. In some cases children could be better managed by providing high dependency care closer to home but more needs to be done to understand demand particularly in relation to care delivered in acute hospitals. Activation System for Patients with Long Term Conditions – HIV Activate patients (the knowledge, skills and capacity to manage their own condition) to enable better outcomes including reduced frequency of exacerbations and associated high cost interventions. Improving Haemoglobinopathy Pathways through ODN Networks Organising Haemoglobinopathy care be organised on a clearly defined network basis. This is set out in published standards produced by specialist soci-			
Proactive and Safe Discharge Proactive and Safe Discharge Proactive and Safe Discharge Proactive and Safe Discharge Improvements to the experience and outcomes for young people as they transition out of Children and Young People's Mental Health Services (CYPMHS) Preventing ill Health Preventing ill Health by risky behaviours (alcohol and tobacco) Improving the assessment of wounds Increase the number of wounds which have failed to heal after 4 weeks that receive a full wound assessment Personalised Care / support planning Embedding personalised care and support planning for people with long-term conditions Improve Paediatric Intensive Care (PIC) capacity utilisation. In some cases children could be better managed by providing high dependency care closer to home but more needs to be done to understand demand particularly in relation to care delivered in acute hospitals. Activation System for Patients with Long Term Conditions – HIV Activate patients (the knowledge, skills and capacity to manage their own condition) to enable better outcomes including reduced frequency of exacerbations and associated high cost interventions.
