Operational Performance at a Glance: March 2020			
Summary :		Covid-19 Reporting & Monitoring status:	<ul style="list-style-type: none"> During the pressurised COVID-19 response period, national and local performance data collections have been scaled down; this is true only for some reporting in order to free up management capacity. Other COVID-19 collections have been introduced instead and we are currently reporting 8 new daily data collections. The Trust continues to monitor and maintain its core operational performance indicators (without impacting too much of the front lines capacity) in an effort to understand its underlying position and the impact that COVID-19 is having on these. Therefore the IQPR continues to report routinely on available performance metrics.
RESPONSIVE	A&E Performance	Continues	<ul style="list-style-type: none"> Performance improves in March 79.3% against a pre-COVID internal target of 80% ; attendance numbers dropped by 23% in March to February (from 17,367 to 13,392) and there were 37% less breaches month on month (4,416 4hr Feb breaches against 2,768 in March); the fall in A&E attendances has been observed on a national level; there were no 12hr+ trolley waits in March and April ED performance is looking strong, close to achieve 90%, with some days hitting +90%.
	Referral to Treatment in 18 weeks (RTT Incomplete)	Paused weekly; monthly returns continues	<ul style="list-style-type: none"> RTT waiting times on the incomplete pathway for March achieved 88% against the 92% standard; whilst the Trust has been failing RTT before COVID onset, the recent low performance is driven by elective activity not being progressed during COVID-19. Following a national picture, and probably the Trust will be slightly better than other trusts, we have seen new referrals dropping significantly compounded by elective activity being paused This has led us to a backlog of 4,645 (3781 in Feb) patients who are waiting above the 18 weeks waiting time; our patient waiting list size is at 38,272 (39364 in Feb), we can see this is not increasing due to new referrals being lower, but of course it is increasing in waiting time. Recovery plans are now key to be progressed to start seeing the patients coming back in safely and start picking up elective activity, the Trust is preparing for this next step. For April our backlog is bound to increase by about 50%+, predicted to be around 7,300 patients above the 18 week waiting time, as April has had the full month COVID impact (in contrast, a performing RTT tolerates around 3,000 patients on the backlog maximum).
	Diagnostics Waits (% of patients waiting >6 weeks)	Paused weekly; monthly returns continues	<ul style="list-style-type: none"> The Trust has continued strong performance up to February over-achieving at 99.98% against the 99% DM01 standard; however, in March we can see a significant drop in this performance due to cancellations from both, patients and hospital, in light of COVID-19. We therefore have a large number of patients who will be waiting above 6 weeks. In March, we report a performance of 91.2% with 769 6-week breaches mainly in MRI (461) and Cardiology (131). Imaging team continues to strive to achieve also the internal Board KPIs and delivery is good across those; in March the Inpatient total turnaround (TAT) time within 24hrs has reached 87% against the 90% trust target; 90% of all Imaging work is turned around under 4 weeks against the trust target of 95%; with a drop in delivering Urgent Other GP tests within 5 days, which is at 68% in March against target of 90%; this has been identified as a 'booking scans' issue rather than a 'testing and reporting' issue; with the large number of COVID cancellations the booking team did not react quickly enough to move urgent GP patients forward and therefore the performance only temporarily lapsed here. The scanning and reporting capacity is sufficient. This has been discussed with the booking team. Plans for recovery of patient activity are in progress using 'cold capacity' on sites where it is safe for patients to be seen.
	Cancer Performance	Continues	<ul style="list-style-type: none"> Reporting February, the Trust, continued to deliver most of the cancer standards, but failing a third months running the 62-day standard delivering 82.4% vs 85% target. March and hence Q4 position for the 62 day standard is border-line pending patient validations across the network to ascertain if they have received treatment. The COVID imposed changes to cancer pathways have enabled more patients to be seen during March, hence the Trust remains hopeful that Q4 will be met. Cancer patients have been through a review process in terms of change to pathways to allow local treatment to continue, with some patients being moved to independent providers. Neutropenic sepsis performance has continued to improve in the last few months, holding up reasonably steady in March despite COVID pressures with 35/39 patients receiving the treatment within the prescribed 1hr framework; 5 patients breaching the 1 hr of which only 1 breach was significantly later, the remaining 4 are within 1-30 minutes after the 1hr.
	Cancellations	Paused	<ul style="list-style-type: none"> Cancellations on the day for non-clinical in March were at 35 cases; whilst this is a reduction to previous month, it has to be noted that the lower cancellations are against a lower elective admissions background so not a true reflection of improvements at this stage; these cancellations in month are at 1.3% of elective admissions against the 0.8% national target.
SAFE	Infection Control	Continues	<ul style="list-style-type: none"> Infection Control metrics continue to report good performance with 35 cases of CDIffs (including community) for the full year against the 41 target and 2 cases of MRSA for the full year. MRSA screening rates have been below standard all year and this is being reviewed with the Infection Control team with possible changes to screening. in March, elective care screening achieved 75% and Non Elective screening achieved 78% in March. From February 1st there were screening changes introduced, for all non-elective patients to be admitted, and the Infection Control team are working to re-base the indicator monitoring.
	Harm Free Care	Continues	<ul style="list-style-type: none"> Falls have risen in March and the Trust falls rate per 1,000 bed days is at 5.66 against the trust target of 5; 110 actual falls have been reported with nil cases of serious harm caused. Looking at the ward trend over the year, most wards have maintained the level of falls to previous experience; however there are 3 ward hotspots in March, which are Newton 3 (T&O), Priory 4 (Stroke Rehab) and Priory 5 (Medicine, but red COVID ward during March), which will be followed up by Group management and Falls team. Pressure Ulcers (PUs) in March reporting 54 overall across the acute and community setting, but remain constant to the longer term average; we report 32 acute setting PUs in March, which results overall in a rate of 1.59 against 1,000 occupied bed days; 22 PUs reported in the community setting. VTE assessments are compliant at 95.3 against the 95% target and this has been consistently met throughout the full year. Sepsis screening of eligible patients is at 93% in March (first time reported in the IQPR) with 20% of those screened being positive, 80% were treated but only 54% within the prescribed 1hr. We are not capturing at this moment in time whether a 72 hour review has been carried out.
	Obstetrics	Continues	<ul style="list-style-type: none"> The overall Caesarean Section rate for March 28.8% mainly driven by an increase in non-elective C-Sections; Full year achievement of 27.8% slightly above the 25% target, but comparing well nationally. Elective rates C-Section rates during the year were at an average of 10.5% and static to previous year. Non-elective C-Section rates were on average 17% during the full year, rising to 19% across couple of months. The level of births in March is at 373 compared to the same period of last year this was at 431; we observed a general downward trend in births during this financial year Breastfeeding targets continued to over-achieve targets across the year delivering on a full year basis 82% vs 74% target
CARING	Patient Experience (FFT), Mixed Sex Accommodation (MSA), Complaints, Flu Vaccination	Paused	<ul style="list-style-type: none"> Flu vaccination completed successfully screening 83.7% of front line staff by end of February. MSA has been paused for reporting purposes. We are not validating at this stage.
EFFECTIVE	Mortality, Readmissions	Continues	<ul style="list-style-type: none"> Readmissions rates (30 days after discharge) are at 8.5% (up from 8%) as at March impacted most likely by COVID-19 patients . HSMR reporting above the tolerance levels as at the end of November (latest available reporting period). After the rebasing they were steady, but still elevated, at between 112-116. Deaths rate in Low Risk Diagnosis groups as at December (latest reportable period) has increased above the tolerance level and seem volatile between Oct to December 2019 - we are awaiting details as to what is causing this. There were 125 deaths reported in the Trust as at February, not as yet impacted to the same extent, as March will be, in respect of COVID deaths.
	Stroke & Cardiology	Continues	<ul style="list-style-type: none"> Not reported fully at this stage, as resource is redeployed in parts. Noting a deterioration in the Angioplasty indicators (Door to balloon time within 90 mins & Call to Balloon time within 150 mins), with both breaching 2 patients out of a total 7 patients. The 2 breaches were due to a delay due to access to Cath lab access – urgent case on table and one delay caused by delay to ECG down in A&E. We note a significant reduction in these eligible patients in the month of March; the steady, previous level of patients runs at c3x times the volume we have seen in March.
	Patient Flow	Continues	<ul style="list-style-type: none"> 21+ LOS patients (long stay patients) count at the end of March is at 161 Delayed Transfers of Care (DTCOs) in March are at 4.2% against the 3.5% target; which is an usual spike for the Trust and is attributed to COVID Neck of Femur performance worsening to 62% in March against the 85% standard
WELL LED	Workforce	Continues	<ul style="list-style-type: none"> Sickness rate, impacted by COVID-19 cases, for March reported at 6.1% in - month and 5% on a cumulative basis. Open, long term sickness cases have slightly gone up in March to 152 vs 140 target Ward sickness overall at 8.1 % in the month showing a jump from February and prior months, highest in Medicine and Surgery Groups. However, looking at nation wide sickness levels, we seem to have been well below predicted levels. Mandatory Training (where staff are at 100% compliance) is at 74.4% in March against the 95% target and expectations for training continue during COVID-19 response. Qualified nursing turnover rate is at 12.5% against the internal target of 10.7% The nursing vacancy rate is at 12.4% in March against the 11% target.
USE OF RESOURCES	Use of Resources	Paused	<i>This has been included in the February IQPR format, but is subject to testing and population of those new indicators against which the trust will monitor itself routinely. The Use of Resources assessment is part of the combined CQC inspection alongside the Trust's rating for Quality. The review is designed to provide an assessment and improve understanding of how effectively and efficiently Trusts are using their resources to provide high quality and sustainable care for patients. The assessment includes an analysis of Trust performance against a selection of initial metrics, using local intelligence, and other evidence. The last Trust rating for Use of Resources was 'Requires Improvement' and the Trust is aiming to achieve a 'Good' rating in the next CQC inspection.</i>
TRUST EMPHASIS	CQC Trust-Wide Insight	Paused	<i>Extracted from the monthly CQC Report, this displays around 80 Trust Wide indicators which the CQC use to get the 'feel' on how the trust is performing across a range of areas. This has now been included in the IQPR but is in the testing phase including finding 'owners' to correctly populate and drive these indicators. The purpose of the inclusion is to provide routine visibility and monitoring to the Board and Committees.</i>
	Persistent Red Indicators	Paused	<ul style="list-style-type: none"> The focus on the improvement of these indicators has clearly been impacted by COVID-19 pressures; almost all of the indicators show performance below previous levels and targets, which is not just the result of lesser focus on improvement, but driven by inability to deliver these performance metrics in the current climate. Greater emphasis is being placed on improvements of areas such as the Safety Plan, Incomplete Tasks and Suggested versus Initiated Care Plans.

Persistent Red Focus & Performance

• Infection Control metrics continue to report good performance with 35 cases of CDI (including community) for the full year against the 41 target and 2 cases of MRSA for the full year.
• MRSA screening rates have been below standard all year and this is being reviewed with the Infection Control team with possible changes to screening. In March, elective care screening achieved 75% and Non-Elective screening achieved 75% in March. From February 1st there were screening changes introduced for all non-elective patients to be admitted, and the Infection Control team are working to re-base the indicator monitoring.

Exec Lead	Indicator	Standard Expected	Plan in Place	Recovery Expected	Mar-20 Actual Perf	Tracking Planned Monthly Trajectory
Dr DC	1 - Mortality Reviews within 42 days	90%	✓	Dec-19	75%	X

	1 - MRSA Screening (Elective & Non-Elective)	95%	✓	Apr-20	76% Elec / 78% Non-Elec	X
PG	1 - FFT Response Target (IP, OP, Maternity and A&E)	25%	✓	TBC	26% IP response rate / below on OP, A&E etc	✓ / X

March performance:

- Clearly impacted by COVID-19 pressures many of the indicators show performance below previous levels and targets.
- Many of the indicators have been 'paused/suspended' from national monitoring, but internally we maintain monitoring although the focus is not on persistent reds at this time.
- Some delays were experienced in signing of performance as resources are diverted elsewhere.
- Falling cancellations levels, but this is in light of lower elective activity due to paused elective operations. Despite this our cancellations on the day for non-clinical reasons are high at 1.3% vs 0.8% target.
- MRSA screening below targets; some changes have been implemented in the non-elective screening, but indicator metrics not caught up with this as yet and measuring here as per previous numerator / denominator.
- FFT showing good response rates at 26% for March, however OP, A&E and Maternity response rates are well below this and awaiting a revised response rate target still as 25% is not appropriate for those areas; the likely to recommend scores from the responders are lower than expected.

RAMI, SHMI & HSMR (12-month cumulative)

Mortality Reviews (%)

Emergency 30-day Readmissions (%) - 12-month cumulative CQC CCS Diagnosis Groups and monthly overall

Mortality (RAMI) - Weekend and Weekday (12-month cumulative)

Crude Mortality Rate

21+ Days Long Stay Rate - NHSI

Estimated Bed Days - 21+ Days

Admissions (%) to Acute Stroke Unit within 4 hours

CT Scan following presentation

TIA Treatment (%)

The stroke indicators in the IPR are based on 'patient arrivals' not 'patient discharged' as this monitors pathway performance rather than actual outcomes which may / may not change on discharge.
National SSNAP is based on 'patient discharge' which is more appropriate for outcomes based reporting.
