## Integrated Quality & Performance Report

Month Reported: **February 2021**

Reported as at: 24/03/2021

TRUST BOARD

## Performance At A Glance - February 2021

<b>Performance At A Glance - February 2021</b>	
<b>Highlights</b>	<ul style="list-style-type: none"> <li>Overall February shows significant pressure in the Trust, with performance deterioration; however some performance metrics have been sustained well and we see improvements already emerging in the February figures. Restoration and Recovery has continued to be monitored (see tab) for key items for which recovery was planned.</li> </ul>
	<ul style="list-style-type: none"> <li><b>A&amp;E performance</b> delivered 77% of care within the 4hr target; 2,596 patients breached the 4 hr target. Year on year performance shows we are seeing 61% of normal (pre-COVID) February attendances.</li> </ul>
	<ul style="list-style-type: none"> <li><b>RTT performance</b> for February was 74.5% against the national target of 92%; clearly target is going to be difficult to achieve quickly in the current climate of prioritisation of patients and pressures as we start emerging out of COVID. A 'normal pre-COVID' incomplete PTL for SWBH would be ~34k, we have risen by 15K since pandemic began and currently at 49,000 patients, as we see referrals coming in as at pre-COVID levels. The pandemic has not just impacted the size of the patient waiting list, but also the waiting time increase for patients resulting in very long waiters.</li> <li><b>Clinically prioritised patients that have</b> missed their clinically due dates at February amount to 3226 missed dates • DM01 diagnostic test performance and waiting list have continued to improve over the last months.</li> </ul>
	<ul style="list-style-type: none"> <li><b>Cancer</b> performance remains below standards in January (latest reported position) showing a decline against targets across most cancer indicators which is clearly unprecedented for the Trust. January delivery is lower than December. Early forecasts suggest recovery of standards by December 2021, however, still subject to ongoing effort to restore much sooner.</li> </ul>
	<ul style="list-style-type: none"> <li><b>Other</b> items to highlight for February are: Pressure Ulcer numbers have risen to previous month, HSMR and SHMI mortality indicators are above tolerance levels, ward sickness has reduced from January high to 8.6%, readmissions have increased considerably to 11.3%; 1x never event in Critical Care, but no patient harm caused</li> </ul>
<b>RESPONSIVENESS</b>	<p><b>A&amp;E Performance</b></p> <ul style="list-style-type: none"> <li>Performance delivered at 77% in February. Capacity pressures continued during February and we saw high levels of breaches; reported 2,596 patients, out of 11,307 attendances, breaching the 4 hr target; we saw a reduction of delayed ambulance handovers (over 60 minutes) reporting 87 compared to January's figure of 381. • All A&amp;E indicators remain affected by COVID pressures. • Our national positioning for February performance in A&amp;E has slipped and we are in the lower quartile behind STP peers who are in the upper quartile</li> </ul>
	<p><b>Referral to Treatment in 18 weeks (RTT Incomplete)</b></p> <ul style="list-style-type: none"> <li>RTT performance for incomplete pathways at 75% vs 92% target. • Our total patient waiting list has further risen to c48,900 patients (as a comparator a 'normal' waiting list for our Trust would be around 33,000 patients); whilst this is a high volume patient list it has accumulated over an almost full year of COVID pressures, the greater significance is the length of time that patients are actually waiting. • c12,500 patients on the waiting list are in the backlog (above 18 weeks waiting time) and this is stretching out much longer e.g. more long waiters well above the 18 weeks • Patients waiting longer than 52 weeks has risen to 2,130 on the incomplete pathway - assessment of harm caused to those patients is ongoing within Planned Care • Oral and Dermatology are the biggest concern for RTT recovery • Whilst referral numbers coming in, are close to pre-COVID levels, the ability to see those patients is strongly affected and it is therefore reasonable to assume that RTT recovery is going to be difficult over the shorter time especially as primary focus remains to see the 'prioritised patients' first irrespective of chronological order.</li> </ul>
	<p><b>Diagnostics Waits (% of patients waiting &gt;6 weeks)</b></p> <ul style="list-style-type: none"> <li>Diagnostic tests (DM01) reporting at 86% in February and doing generally well at total level - this measures performance against the national target to screen patients within a 6 week period (from referral to test); • our diagnostic patient waiting lists shows 1,352 patients above this 6 week waiting time and only 480 patients who are waiting above 13+ weeks; and whilst this is not ideal, this is a significant improvement on prior months. • Of the 1,352 patients waiting above 6 weeks, this can be split as follows: 592 patients in Imaging (mostly Ultrasounds); 580 patients in Endoscopy, 118 patients in Neurophysiology, 56 patients in Cardiology and 6 in Audiology; there are no patients above 6 week in Respiratory physiology or Urodynamics which is an excellent achievement. • The Trust ranks well in the upper quartile on the diagnostic performance. • Clear focus is essential for the prioritised patients now - we have as at February 3226 patients who missed their clinically due dates.</li> <li>The specific Imaging diagnostic patient volumes (CT, MRI, X rays and Ultrasounds) in February were at 23,092 and whilst getting closer to pre-COVID levels, which were at an average of c30,000-32,000 per month, we are still not seeing those patient numbers. Board KPIs below are showing a slight deterioration from recent months.</li> <li>Against these February volumes, and the top three Board KPIs performance achievement was: Inpatient total turnaround (TAT) time within 24hrs at 79% against the 90% trust target (previous high was 91%); Urgent GP tests within 5 days achieved were at 62% 90% target, impacted to a large degree the non-responder/non-attenders category (patient choices to stay away from hospital due to COVID anxiety). The KPI measuring 'Overall Imaging Turn around Time for all tests' shows 83% of achievement, and measures all of the 'Imaging work' delivery under the 4 weeks (target of 95% and previous highs of 94%).</li> </ul>

## Performance At A Glance - February 2021

	<b>Cancer Performance</b>	<ul style="list-style-type: none"><li>• Reporting the January position (latest available reporting period), the Trust has not delivered any of the key cancer standards, which is clearly unprecedented. However, we can see small improvement to last month. 2 week waits improvement delivery expected by end of April for Breast patients and by end of May for Dermatology patients. Early forecast against the 62 days standard suggests recovery by Dec21, however much more effort is on its way to bring this recovery forward, update to forecasts will follow therefore.</li></ul>
	<b>Cancellations</b>	<ul style="list-style-type: none"><li>• February late-<b>on the day cancellations</b> are low, linked to low elective activity. However, we are still breaching the national target of 0.8% cancellations against elective activity and report a rate of 1%.<ul style="list-style-type: none"><li>• February reports 3x <b>28 day breaches in the Oral service</b> (NHS guaranteed timeline post cancellation).</li></ul></li></ul>

## Performance At A Glance - February 2021

SAFE	<b>Infection Control</b>	<ul style="list-style-type: none"> <li>• <b>Infection Control</b> metrics continue to report reasonably good performance; however E Coli Post 48 hours doubled to 35.49 per 100,000 bed days on average our performance is ~15</li> <li>• MRSA screening rates for non-elective patients delivering 87.8% against target 95%.</li> <li>• Elective patients MRSA screening rates falling to 67.8% being under target of 95% in all Groups other than Women's &amp; Children's</li> </ul>
	<b>Harm Free Care</b>	<ul style="list-style-type: none"> <li>• The Trust <b>falls</b> rate per 1,000 bed days in February reports an incident rate of 3.88 and well in line with the Trust target of 5; we reported 71 absolute falls and 1 serious harm against those falls</li> <li>• The Trust Falls Lead Nurse looked at a comparison of number of falls during the covid period among some of the regional Trusts; this showed that SWB is below the average for the eight Trusts in the sample. Some Trusts reported higher and lower than normal incidences. As a group they looked at the data and drew out common themes experienced during the covid surge in order to learn and prepare for the future.</li> </ul>
		<ul style="list-style-type: none"> <li>• <b>Pressure Ulcers</b> (Hospital or DN Caseload Acquired PUs) in February have increased to prior months; overall the Trust reports 106 PUs (87 last month) in absolute numbers. •The highest, hospital acquired pressure ulcer, incidence ward areas (October 2020 - February 2021) were the respiratory and critical care areas. This correlates with the increase in respiratory illness and very high risk patients. The Covid pandemic has had an effect on increased numbers of incidences of pressure damage. These patients are at very high risk of developing pressure damage due to their condition, compromised respiratory function and oxygen dependency. These elements present a challenge to pressure ulcer prevention as repositioning is more difficult in this group of patients</li> <li>• The Trust Tissue Viability Nurse (TVN) meets routinely with other West Midlands TVS leads, and monitors our relative position to other providers. There is an increase in 'device related damage' in all the Critical Care areas, related to patients being proned for 12 hours at a time. Nationally no solution has been found as yet, the breathing tube has to be there and the damage caused is outweighed by the risk of moving the patients. NHSE/I are trying to gather some incidence data around device related damage.</li> </ul>
		<ul style="list-style-type: none"> <li>• <b>1 never event</b> was reported in February for Surgical Services (Critical Care) - no harm was caused to the patient.</li> </ul>
		<ul style="list-style-type: none"> <li>• <b>VTE assessments in February</b> delivering 95.3% at Trust level against the 95% target, Surgical and WCH are below the target however.</li> <li>• <b>Sepsis (adults only)</b> screening performance in February has been holding up to very well at 97.4% of eligible patients being screened; screened patients who are positive have increased generally during COVID and are at 27.3% in February (we were seeing just below 20% at pre-COVID levels); 88.4% of the sepsis positive patients were treated and of those 83.1% were treated within the prescribed one hour still behind the 100% target and continues to be an area of focus.</li> <li>• <b>Neutropenic Sepsis</b> reporting delivery 77% of patients were treated within the 1hr from door to needle standard (5/22 breached). The average door to needle time was good at 54 minutes in February below the 60 minutes standard (1hr). The 5 breaches show delays above the hour between 38-91 minutes; no harm was caused to any of the five patients which breached</li> </ul>
<b>Obstetrics</b>	<ul style="list-style-type: none"> <li>• The overall <b>Caesarean Section</b> rate for February is just above 25% in month, below 30% on a year to date basis. This overall C Section rate can be split between :</li> <li>• Elective C-Section rate at 10.4% in line with long term average trend</li> <li>• Non-elective C-Section rate at 14.9% with were on average 18.7% during the full year (pre-COVID periods)</li> <li>• The monthly 'Ockenden' reporting process and improvement focus is in place and informs Q&amp;S Committee and Trust Board on a more detailed performance basis against specific Trust actions identified (Must Do's and Should Do's).</li> </ul>	

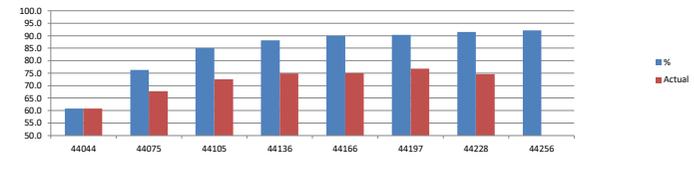

## Performance At A Glance - February 2021

<b>CARING</b>	<p><b>Patient Experience (FFT), Mixed Sex Accommodation (MSA), Complaints, Flu Vaccination</b></p>	<ul style="list-style-type: none"> <li>• <b>MSA</b> has not been reported since the start of the pandemic due to COVID. The Chief Nurse is planning a review of this reporting and validation process.</li> <li>• We observe low score and response rates against <b>Friends &amp; Family tests and indicating a low benchmarking performance for the Trust</b> • The number of active <b>complaints</b> in the system is double the pre pandemic levels; using PublicView benchmarking tool we have analysed our relative position which is in the lower quartile and the team are looking at these findings.</li> </ul>
<b>EFFECTIVE</b>	<p><b>Mortality, Readmissions</b></p>	<ul style="list-style-type: none"> <li>• Readmissions rates (30 days after discharge) have gone up again in January to 11.3% in month (9.5% cumulatively) and remain high over the last year generally. The Trust runs an improvement task force that looks at readmissions across all groups, but this has been paused due to COVID for the time-being.</li> <li>• HSMR (measures expected vs actual deaths in-hospital) reporting at 142 above the tolerance levels as at the end of October 2020 (latest available reporting period and also during COVID), showing a continually, elevated position against the weekend mortality rate which is 150 and weekday at 140. This position makes the Trust HSMR position a significant outlier compared against the national picture. Deaths in which COVID19 was recorded in episode 3 or later have increased, showing hospital acquired COVID19, also the number of deaths where the Charlson Index is below 5 has increased (these are patients with few complications and comorbidities and therefore less likely to die).</li> <li>• SHMI (measuring expected vs actual deaths including deaths 30 days post discharge from hospital) is elevated at 115 for September 2020 (latest available position) with Cancer of the Lung, Sepsis and Pneumonia being the top three death reasons. The SHMI will also be impacted by the coding improvements, which are planned for HSMR.</li> <li>• Medical Examiners' mortality reviews fell below the performance target of 90% to 85.1% this maybe due to the increase in total deaths during January / February period.</li> </ul>
	<p><b>Stroke &amp; Cardiology</b></p>	<ul style="list-style-type: none"> <li>• <b>Stroke</b> performance good against most indicators, but struggling to recover admissions to the stroke ward within 4 hours (at 43% in February).</li> <li>• Thrombolysis performance is at 50% for February (1/2 patients breaching due to delay to CT scan). • Patients staying on a stroke ward for more than 90% has been at 68%, this was due to an outbreak of COVID19 on Newton 4, patient had to be outlied to non stroke wards. N4 impact still felt in February.</li> <li>• <b>Cardiology</b> performance within target levels in February - on target.</li> </ul>
	<p><b>Patient Flow (Responsive)</b></p>	<ul style="list-style-type: none"> <li>• <b>21+ LOS</b> patients (long stay patients) count at the end of February at 74 patients (this measures patients within the acute setting; from 1 April 2020 we started reporting just the acute patients in line with current NHSI guidance and to align with our SitRep).</li> <li>• <b>Femur</b> performance at 93% in February against the 85% target for the fourth month meeting the standard consecutively, which is a significant achievement</li> </ul> <p style="text-align: right;">• <b>Neck of</b></p>
<b>WELL LED</b>	<p><b>Workforce</b></p>	<ul style="list-style-type: none"> <li>• Sickness rate overall for February is at 5.8% in month and 5.8% on a cumulative basis</li> <li>• Ward sickness rate specifically is at 8.6% showing a reduction on prior months</li> <li>• Long term sickness when excluding COVID related cases, is at pre-COVID levels around 140 - 150 as a monthly stock figure</li> <li>• Nursing vacancy rate is at 13%; Nursing turnover at 12% in February</li> <li>• Mandatory Training (where staff are at 100% of their MT) is reducing to 69% against the 95% aim clearly impacted by COVID pressures</li> </ul>
<b>USE OF RESOURCES</b>	<p><b>Use of Resources</b></p>	<ul style="list-style-type: none"> <li>• The Use of Resources assessment is part of the combined CQC inspection alongside the Trust's rating for Quality and the wider Single Oversight Framework. The review is designed to provide an assessment and improve understanding of how effectively and efficiently Trusts are using their resources to provide high quality and sustainable care for patients. The CQC assessment includes an analysis of Trust performance against a selection of CQC initial metrics, using local intelligence, and other evidence. The last Trust rating for Use of Resources was 'Requires Improvement' and the Trust is aiming to achieve a 'Good' rating in the next CQC inspection and performance will continue to be monitored with this aspiration. • Using a crude method to predict the CQC rating based on an inspection right now, which is taking factors other than what is highlighted in use of resources e.g. RTT, A&amp;E etc, the Trust would mostly likely score 'requires improvement' again.</li> <li>• We have populated 7/16 of the Use of Resources metrics. Currently, no work is under way to increase this proportion and start deep-diving in presented opportunities, however, this is significantly slowed down due to CV19 and will be picked up as part of the newly established Efficiency Group.</li> </ul>

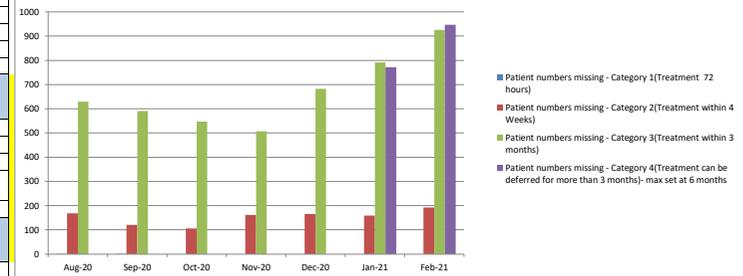

Recovery & Restoration SWB :	Aug-20	Sep-20	Oct-20	Nov-20	Dec-20	Jan-21	Feb-21	Mar-21
<b>Activity Delivery &amp; RTT</b>								
This measures activity % age activity achievement compared to the three different Trust Trajectories set :	Phase 3 : 70% IP / 90% OP	Phase 3 : 80% IP / 80% OP	Phase 3 : 90% IP / 100% OP	Phase 3 : 90% IP / 100% OP	Phase 3 : 90% IP / 100% OP	Phase 3 : 100% IP / 100% OP	Phase 3 : 100% IP / 100% OP	Phase 3 : 100% IP / 100% OP
