

# Advice following a colonoscopy or sigmoidoscopy with entonox

Information and advice for patients

## Endoscopy

You have had a colonoscopy or sigmoidoscopy with Entonox. Entonox is a gas mixture of nitrous oxide and oxygen. It is used as a painkiller and the effects wear off within minutes.

### Pain

You may experience some tummy pain and discomfort following your colonoscopy or sigmoidoscopy due to the air we have put into your bowel. Walking around and taking simple painkillers such as paracetamol will help. Follow the dosage instructions on the packet. You may also pass small amounts of blood from your back passage following the test, this is normal.

### Normal activities

You should be able to resume all of your normal activities as soon as you feel well enough. This includes driving and work.

### Results

We will send a copy of your colonoscopy or sigmoidoscopy report to the doctor or nurse who referred you for the procedure.

We will also send a copy of this to your GP.

If your GP referred you for the procedure please make an appointment to see them.

### Follow-up

You were referred for this appointment by: \_\_\_\_\_

A follow up appointment has been arranged for \_\_\_\_\_

### Symptoms to report

Please contact us if you experience any of the following symptoms after this procedure:

- Breathing problems
- Severe pain in your tummy
- Passing a lot of blood or blood clots from your back passage
- Appearing pale
- Clammy skin (cold, moist skin)
- A temperature of 38°C or higher
